

Database application for tracking collections of various media types such as books, CDs, magazines, comics, DVDs, eBooks, and more. The application can track all supported media type in a single database.

General

Database application should support a collection of at least 10,000 items without any noticeable performance problems.

Database application source code should be compile-able and run-able on Windows or Linux hosts.

Database application should use a single file to store entire database so that it easy for a user to copy their data to another computer or to backup their database to online or offline backup storage. Users may choose to create separate database files for certain media types as desired. The single database file should use the “.mcd” file extension.

Database application should support automatic backup of database file to prevent possible corruption during editing / browsing session. The backup file should use the “.mcb” file extension.

Media item data fields

Media type	Table fixed	Book, magazine, comic, CD, DVD, custom
Item Id	Numeric	000001
Date Added	Date	Dec 25, 2009
Title	Table custom	
Subtitle	Table custom	
Issue whole #	Numeric	“32”
Issue Date	Date	“May 1935”
Volume volume #	Numeric	“3”
Volume issue #	Numeric	“8”
Author / Performer	Table custom	
Composer	Table custom	
Editor	Table custom	
Format	Table fixed	Hardcover, softcover, paperback
Type	Table fixed	Fiction, non-fiction
Genre	Table fixed	SF, Fantasy, Mystery, Horror, Classic
Publisher	Table custom	
Country	Table custom	
Edition	Table fixed	1 st , 2 nd , 3 rd , etc
Printing	Table fixed	1 st , 2 nd , 3 rd , etc
Publication Date	Date	“1981”

Pages	Numeric	“408”
Condition	Table fixed	M, NM, VF, F, VG, G, Fr, Pr, New, Used
ISBN	Numeric	1234567890 or 0001234567890
Call Number	Text	J234.0
Cost	Currency	\$2.49
Value	Currency	\$10.00
Location	Table custom	
Status	Table fixed	Own, Want, On loan, Sold, Lost
Read status	Table fixed	Read it, Not read it
Read date	Date	Oct 25, 1985
Cover Artist	Table custom	
Penciller	Table custom	
Inker	Table custom	
Colorist	Table custom	
Letterer	Table custom	
Tags	Table custom	
Description	Text	1024 characters
Comments	Text	256 characters
Notes	Text	1024 characters

User Interface

Standard “windows” like interface with menu bar, tool bar, search bar, and main data viewing area. Potentially allow for a customizable tool bar.

Menu bar should include menus for File, Edit, View, Search, Tools, Window, and Help.

File menu should include new, open, save as, print/report, import, export, exit. Print/report should open a print/report dialog box. Import should support importing from a CSV file, a “library thing” file, and TBD. Export should support exporting to a CSV file, a “library thing” file, and an SQL command list file.

Edit menu should include add item, edit item, clone item, delete item.

View menu should include items for viewing by media type, and custom view (which allows for specifying which fields are visible and in what order they are displayed).

Search menu should include link to advanced search dialog box, predefined quick searches, and link to simple find dialog.

Tools menu should include ISBN lookup, comic or magazine title lookup, and TBD.

Window menu should include TBD.

Help menu should include link to help dialog, link to online help, and about dialog.

Tool bar should include shortcut buttons for operations such as new database, open database, save database, add item, edit item, delete item, clone item, search, sort, view, setup, and help.

The new database operation should open the new database dialog box.

The open database operation should open the open database dialog box.

The save database operation should open the save database dialog box.

The add item operation should open the add item dialog box for data entry. This dialog box can feature tabs to help keep things from becoming too cluttered. When the user selects the media type, the main data entry tab should expose and/or hide fields that correspond to the selected media type. For example, a book type would emphasize book title, subtitle, author, genre, and publication details, while a comic type would emphasize comic title, issue number, publisher, artists, and so on. These data entry fields should be moved around as per media type to make data entry easier.

The edit item operation should open the add item dialog in edit mode for the selected item.

The delete item operation should delete the selected item.

The clone item operation should open the add item dialog and populate the fields with the data from the selected item.

The search operation should open the advanced search dialog box.

The sort operation should open custom sort dialog box.

The view operation should open custom view dialog box.

The setup operation should open setup/preferences dialog box.

The help operation should open the help dialog box.

Search bar should include TBD.

The main view area should include TBD.
